Scientific Breakthrough Allows You To...

# “Use Water As Fuel And DUBLE your Car’s Mile-per-Gallon In No Time!”

+Get The IRS To Pay YOU For Being Environmental-Friendly!

Gas Prices Pumping-Up? Not Your Problem!

Dear Friend,

The day has come for you to stop worrying about the forever-rising price of gas – **FOR GOOD! How is this possible?** Due to the latest scientific discoveries in fuel-efficiency and alternative fuel use, you are now able to **drive your car use water as fuel!** Plain tap water! Just imagine how much you will save! Bare with me for exactly 4 minutes (I promise, not more than that), and I will show you...

## “How To Convert Your Car To Run On Water And:

- Save Lots \$\$\$ Worth Of Gas
- Even Make Some Extra Cash
- Get IRS Tax Refund
- Improve Car Performance”

But before we get started, I want you to know the **Top 4 Reasons why hundreds of drivers have already converted their cars:**

**Reason 1:** There’s **no need for you to replace your car;** instead, you’ll convert it to run on water!

**Reason 2: No need to buy expensive equipment for the conversion!** – all the equipment is available at almost any hardware store, and will not cost you more than a total \$50!

**Reason 3: 100% legal and safe** (for you as well as your car)!

**Reason 4:** This system has been tried and tested by many, many people before... So it is now **GUARANTEED to work – on ANY car** (whether it runs on diesel or gasoline)

## “So... What’s This BIG Scientific Discovery Allowing Me To Run My Car On Water?!”

Research on using water as a source of energy has been conducted for tens of years now; and after all this hard work, scientists have discovered the ‘secret’: they can now turn H<sub>2</sub>O( water) into HHO (oxyhydrogen). **HHO is one of the single most important discoveries of the past 100 years.** Here’s a video of what scientists have discovered can do with HHO: it’s pretty impressive...

```
<object width="425" height="355"><param name="movie"
value="http://www.youtube.com/v/vm5JhpWt4GQ&hl=en"></param><param name="wmode"
value="transparent"></param><embed
src="http://www.youtube.com/v/vm5JhpWt4GQ&hl=en" type="application/x-shockwave-flash"
wmode="transparent" width="425" height="355"></embed></object>
```

So, combing the power of water and gas, HHO will power your car, while doubling your gas mileage. What it does is it extracts 2 Hydrogen atom and 1 Oxygen atom from the water. This is what creates HHO gas, the Hydrogen atom combusts producing energy.

There's a lot of fuss on the internet about HHO being able or not to actually run a car. But the truth is, it can.

Putting aside all the 'experts' who of course have their 'theoretical' points of view, people who've actually tried it made it work! **The State Journal** reported, in an article published on the 6<sup>th</sup> of May 2008 (by Scott Unger) that **3 Franklin County Career and Technical Center students** and their automotive technology teacher, Francis Wheatley decided to give it a try – on the teacher's 1994 Ford F150. And even with the 'primitive' device they came up with, **the professor says he had indeed noticed that his MPG has increased significantly.**

Now imagine YOU being able to install a system like this on your own car. Except it would be a more efficient one, the result of my own testing and improvement.

After over 3 years of testing various methods, devices and system, I finally came up with the most effective one; I myself am now 40% more fuel efficient – and you can too!

**AUTHOR  
PICTURE  
with his car**

If you're wondering...

### **“Why Would Anyone Use Such A System?”**

People have various reasons that determine them to install such a system – some have ecological reasons, some because of the savings, and others to protect their car. The benefits are many... But anyway, since I cannot tell you why *others* decide to use this system, here's why I use it:

I know how everyone's talking about environmental issues right now, **but I'll be straight honest with you here:** when I first started looking into water-fuelling my car, I cared little about *also* helping the environment. I was into it mostly because I realized it would save me a fortune! I've practically reduced my gas costs to half!

I installed the latest 'version' of the "Half Water Half Gas" on my 2002 Mazda MX-5. I must admit, **it drives smoother than ever** – not to mention how much I'm saving on gas!

Now, just imagine being able to...

## **Save Money, The Environment AND Your Car's "Health"**

Well, that is possible! This new system uses water to help burn your normal fuel with higher efficiency. **The internal combustion engines – as we know them today – are highly inefficient:** only 30% to 45% of the fuel is converted to useable energy - as any mechanic can confirm! The remaining 55% to 70% of the diesel / gasoline is simply wasted! It gets converted to:

- **pollution**
- **carbon deposits (unburned fuel)**
- **and generates heat that contributes to global warming.**

Using HHO can make this process up to **twice more efficient!** And look what else this system will do for you:

- **Enhance engine power (up to 33%) and performance - saving you big bucks at the same time!**
- **Remove and prevent carbon build up in the engine - allowing you to enjoy a smoother ride**
- **Cleaner emissions: after it burns, HHO turns right back into water! This means less 'deadly' chemicals for you and your family!**
- **Reduce the engine temperature – guaranteeing you a longer life-expectancy for your car**
- **Gives you the feeling that you're helping out on environmental issues. I know I said before that at first I cared little about this, but now I'm extremely proud of 'doing my bit' – and you will be too!**

**Bottom line is: converting your car to run on water will save you big bucks, make you car perform better, AND protect the environment! This is a win-win-win situation!**

Your biggest worry right now must be...

## **“Is This Method Safe?”**

**Well... Let's See Exactly How It Works:**

Burning HHO is no different than what you are running now... The system is **easy to install** – especially if you get advice from someone who's already done it before – and you don't have to be a rocket scientist to figure it out.

You install a hydrogen generator on your car that doesn't take as much space as you probably imagine right now – just about **3.7 inch wide (9.4 cm) by 8 inch tall (20.3 cm)**. You should have easy access to the device. Ideal places I found are near the battery or the washing fluid, or even in front of your radiator.

You will not need to use a lot of water – because HHO (from the water) will actually supplement regular gasoline and increases the efficiency at which the fuel burns, drastically increasing your gas mileage.

The basic concept is you **install a small container, fill it with water and then add a little baking soda**. Then this gets 'hit' with electricity delivered from the car's battery. This will cause the water molecules to break up into what is known as HHO.

This gas is then sucked into the air manifold by the engines vacuum, and then into the engine - where it is combined with regular gasoline and combusts.

This whole process requires **no alterations to your engine or car's computer**, and it **works on both carburetor and fuel injection systems**. The results are amazing - you can **increase your gas mileage by 50-100%!**

**Aaand...** not only that, but you will also notice that **your car will actually be running**

## smoother and quieter, extending your engine's life!

Oh yes, and the environmental thing too :) Using HHO technology, your car will even produce cleaner emissions! Yeah... If you're anything like me, right now - this doesn't get you anywhere close as excited as the **mileage increase** I was telling you before!

## “But How Do I Know It Really Works?”

Well, good question! **Why should you believe all this**, right? As I was telling you before, there's a lot of fuss on the internet about whether these systems really do work – or not. If I were you, I wouldn't listen to all those 'opinions', but **try looking for proof** instead. And speaking of proof, here are some people – just like you and me – who decided to give it a try. Here are their stories:

“I installed your HHO system on my SUV and **not only did my mileage increase from 13 MPG to 26 MPG (I'm VERY SERIOUS!!!) but my SUV performance improved** - the responsiveness is amazing and I didn't even think I would notice that part! Anyone who says it doesn't work is someone who is afraid to find out for himself! I invite them to come and look at my SUV any day! Don't listen to anyone on this - prove it to yourself – it's the only way you'll really know - and its completely reversible - what do you have to lose besides the time of building the electrolizer?”

Patty Schmitt, Boston, US

“My son is very into this technology and successfully converted his car to drive using water - I saw it with my own eyes and actually held the tube for him the first time he used it. It's just amazing!

**He's always telling me how much he's saving now – that I decided to get one of these myself!**

I plan to install it first thin on Monday! And just wait until I tell all my friends about it! I'm absolutely sure they'll all want it!

This is simply great!!”

Harry Giles, Queensland, Australia

“ Hey,

This is Jim, and I just want to let you know that I installed the conversion system on my car **and I took it on a road trip - and averaged 89 miles per gallon!**

Simply amazing! Great 'trick', man! I'm really glad I got it done! Oh, and please, let me know of any future improvements!”

Jim Hennix, Illinois, US

“I just finished setting up my system, it's under my hood beside the battery... It fits perfectly, and so far (in 2 weeks) **I noticed an increase in my MPG from 17 to 23. I'm loving it.**

Less noise, and... yeah, a bit proud about being environmental-friendly too.

I hope this gets popular soon; it's great for me, my car and as it seems, Mother Earth too.

Cheers,  
Mark Joshua, Worcestershire, UK”

“I was really skeptical at first... But the I said to myself... Its not like I'm spending a fortune on this!

So I just went for it. And now **I am the proud driver of a water-fueled 2005 Nissan Sentra – with a mileage increase from 28 mpg to 50 mpg now! Simply brilliant!**

I'm so happy I got this done to my car, that I'm now recommending it to all my friends! I really hope this technology takes off soon, so we can repair a little of the damage we've caused to the environment, as well!”

Mary J., Massachusetts, US

“I remember last year, struggling to get the money for my first car – and the struggling to get the money for gas, and... To be honest, I thought my struggling will not be over for the next 5-7 years! (until I got older, and got a better-paying job)...

**But since I converted my car to run on water and gas, all my problems are over!**

My MPG rate has almost doubled, and I never have to worry about the gas prices going up!

I can finally enjoy the car I worked so hard to pay!”

Christian Thompson, Worcestershire, UK

## “Give My ONE Reason why I Should Try This!”

Well my friend, here’s **my question**: when so many people from all over the world have tried and tested this whole HHO system – and it worked – **would you really be willing to mindlessly spend thousands of dollars on inefficient gas**, when there is so much solid scientific – and practical proof – of this technology working? I’m sure you can think of more clever things to spend that money on :) With one year’s savings (or less), you’ll probably even afford a new car!

The way I see it, anyone not even willing to try this (especially **since it does not affect your car warranty and it’s a totally reversible process**) is mindlessly dismissing the amazing advances in science!

## “So... How Do I Convert My Car?”

Since we now both agreed that **it’s not that much a question of if and it’s more a question of HOW...** the way I see it, you basically have two possibilities:

1. Spend about 2-3 weeks gathering information on the internet about how to do it, and test all those methods – to see which one really works – and which ones don’t...
- or*
2. Use my already-**proven method for doubling your MPG** in less than a day!

After discovering myself how effective this system really is, I said to myself: “Every car owner should be able to cut back on their gas expenses. I should make my system available to others!”

And so here I am today, sharing my system **with you!** Starting from this day on, **you too can benefit of this amazing technology and use water to drive your car!** This will...

## Improve Your Driving Experience In Ways You Never Thought Possible!

**You, my fellow car driver, will be able to...**

- **save an average 40% on your fuel costs** – and use that money for your hobbies!
- **enjoy a smoother and quieter ride** in your car – while helping save the environment at the same time
- produce cleaner emissions and hence **reduce damage to your health and the health of your family**
- **take advantage of the lowest-priced car conversion method** – without affecting your warranty!

**All this, thanks to this amazingly simple to use do-it-yourself guide that I myself have put together! Here it is:**

**Introducing...**

## “Half Water Half Gas”

**Product picture**

**The complete guide for how to convert your car to run on water!** This extremely simple-to-use book will guide to installing your own system on your car. You’ll find out all the information you need on:

- all hardware equipment and tools you need for the system; (they’re all easy to find; you’ll be able to get them at almost any hardware store)
- step-by-step instructions – with schemes and pictures – for you to build the system yourself
- complete information on maintenance and troubleshooting – so you’ll be sure that your system will always work properly

## Oh, Wait! There's More!

Order "Half Water Half Gas" TODAY and you also get...

### These 4 Bonuses

(A Total Worth Of \$273.87)

### Absolutely FREE

Ordering "Half Water Half Gas" Today!

#### Free Bonus No.1 – "Payback Time: How To Get IRS Tax Refund For Driving A Water Powered Car"

##### Bonus picture

By converting your car to running on water, using "Half Water Half Gas", you are driving a "green" car. This doesn't just help save the environment, but also helps our National economy - by reducing the costs that the government spends on pollution, hospitals, national debt for importing the oil you normally use to drive your car... and the painful price of economic dependability (on other countries' oil).

It is this why, since 2005, **the IRS could not afford to continue ignoring alternative fuel anymore.** So they started giving considerable rewards for "green" cars, "green" fuels and "green" upgrades. This means that YOU can get back up to \$2,000 for a car, or up to \$50,000 for a truck.

In fact, here's a little extract of the new IRS code:

"Deduction limit. The maximum deduction you can claim for qualified clean-fuel vehicle property with respect to any motor vehicle is one of the following.

1. \$50,000 for a truck or van with a gross vehicle weight rating over 26,000 pounds or for a bus with a seating capacity of at least 20 adults (excluding the driver).
2. \$5,000 for a truck or van with a gross vehicle weight rating over 10,000 pounds but not more than 26,000 pounds.
3. \$2,000 for a vehicle not included in (1) or (2)."

**Get "Half Water Half Gas" today – and convert you car; on top of saving hundreds, maybe even thousands of dollars worth of gas, you'll also have full access to this document – explaining exactly what you need to do to benefit of this Tax Refund!**

#### Free Bonus No.2: " How To Make Your Car STAND OUT"

### Bonus picture

Your car may be "**just another Ford**" or "**just another Chevy**". Or **you can make it special, unique and sexy** - without spending a fortune on it. I will show you how you can do this in my easy-to-follow guide!

You see, **perfection is in the small things**: the rims, the floor mats, the mirrors, stylish accessories.

Applying just a few tips from this guide will draw tons of attention, admiration and sometimes even jealousy to you and your car!

### Free Bonus No.3: "Maintenance Secrets"

### Bonus picture

Chances are maintenance is a huge pain in the rear for you right now.

And that's because it's usually messy and expensive. But there is another way.

This guide will show you how to keep your car in great shape and looking great *el cheapo...*

Discover the 'secrets' of **how to take care of your automobile, without paying hundreds of dollars!**

### Free Bonus No.4: "Tuning Your Engine The Easy Way"

### Bonus picture

Do you know the movie "Too Fast Too Furious" or did you ever play "Need for Speed" on a computer?

If so then you probably know that **small changes to the exhaust, suspensions, tires etc can bring a solid increase in your car's performance**: more horsepower, better stability and handling etc

Some changes like reprogramming your car's computer can be hard, but there are other quick and easy tweaks that you can perform to boost performance. I will show you what works and how to do it.

**Grab This Package NOW**

And You'll Never Have To Worry About Gas Prices Going Up!

**Click Here To Get "Half Water Half Gas"**

**+ The 4 Free Bonuses!**

## But Hey, Don't Take My Word For It!

**Listen: I'm not going to stand here and beat my chest and tell you that this is the best thing since sliced bread!**

You don't know me from Adam and you don't know whether or not this system that I have can help you. So, the best way to convince yourself is to **give you "Half Water Half Gas" and let you try it.**

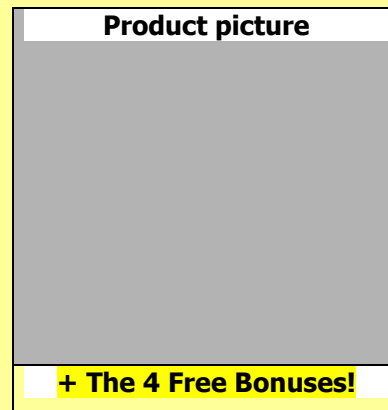

**I'm not asking you to trust me, I'm not asking you to take my word for it, I'm not asking you to commit to anything.**

All I'm asking for is the opportunity to prove it to you!

So here, as a limited offer, you can have **"Half Water Half Gas"** paying only ~~\$71.46~~ **\$35,73 – limited time offer!**  
**That's an entire 50% off the normal price!**

But please **grab this deal now, before it's gone!** I'm only doing this for a limited time, because I really want people – just like you – to start using this amazing technology!

The faster it gets popular, the faster they will use it in new cars! It's actually estimated that this technology will be used in new cars by the year 2012; but... hey, why wait until then, when you can set it up on your car – this very week?

But I want you to feel this is a good call that you're making. So...

## OK, No Need To Rush Into a Decision!

**Yes, you read that right!** I'm perfectly aware that this sounds a bit too-good-to-be-true, right now! And so, there's absolutely no need for you to rush into a decision; because **I found the perfect way for you to make sure you make the right call – and still benefit of the 50% off limited discount!**

I'm giving you my...

### 100% Ironclad 56-Day Guarantee!

**Claim your very own copy of "Half Water Half Gas" for only ~~\$71.46~~ \$35.73 – if you order TODAY, [[date]].**

See exactly what this system requires, how it's installed. The get to work: convert your car to run on water!

**Drive your car for 4 whole weeks – and see exactly how much money you save on gas!** If you want, you can even keep track of what you spend on gas, and compare it to what you used to spend before installing the system.

And if in **56 days after getting this guide** – and using your new water-fueled car – you're not completely and fully satisfied... you can send me a note and **I'll issue a full refund!**

**Why make a decision now, when you can make the decision AFTER you've already tried my system?**

*But I really don't need to worry about that! This system works like a charm – and you'll realize you've saved hundreds of bucks on gas in no time!*

Cheers to you my friend, and I only wish you happy driving and gas savings!

Yours,

**Howard's  
picture**

Howard Hauk

Now, to summarize everything you're getting...

## Here's What You Get For Only \$35.73

(That's Probably Less Than You Now Pay For Gas On An Average Week):

○

Bundle Picture + name of the products

[[Order Button:]] Get It All Now For Only ~~\$71.46~~ **\$35,73**

- The special **50% off discount** – limited offer, if you order today, [[date]]!
- **100% Iron Safe 56-Day Money Back Guarantee** – all risk is on me; if for any reason you're not satisfied with "Half Water Half Gas" – after trying it for an entire 56 days, I will issue a full refund!
- The promise that **your MPG will improve drastically** the minute you've installed the system!
- **The pride and satisfaction of knowing you're actively involved in protecting the environment** – and assuring the safety of your children and grandchildren!

## Grab This Package NOW
